

Executive Dashboard Summary & Attrition Analysis

Comprehensive Technical Evaluation of churn_dashboard.pbix, Portfolio Risk Drivers, and Strategic Retention Roadmap (INR / ₹)

1. Executive Portfolio Health & Financial Snapshot

A quantitative audit of the retail banking customer portfolio reveals an aggregate customer base of 10,000 accounts representing ₹76.49 Crore in total deposit assets. The portfolio exhibits a baseline churn rate of 20.37% (2,037 departed accounts). Churned customers carried higher average deposit balances (₹91,108.54) than retained customers (₹72,745.30), resulting in a cumulative capital loss of ₹18.56 Crore (24.26% of all deposits).

Metric	Portfolio Value	% of Total	Strategic Context
Total Customer Base	10,000 Accounts	100.0%	Full customer sample audited across France, Germany, and Spain
Retained Customers	7,963 Accounts	79.63%	Core active and retained banking clientele
Exited Customers (Churn)	2,037 Accounts	20.37%	High attrition velocity requiring structural intervention
Total Portfolio Balance	₹76.49 Crore	100.0%	Cumulative deposit capital managed by the institution
Capital at Risk (Balance Lost)	₹18.56 Crore	24.26%	Substantial net liquidity outflow due to customer attrition

2. Technical Power BI Architecture (churn_dashboard.pbix)

The Power BI workbook is engineered with an optimized star/single-table data model accompanied by an isolated calculation table (_Measures). The report consists of three dedicated analytical pages targeting executive, diagnostic, and operational workflows:

Page 1: Churn_Overview (Executive Scorecard)

- Top KPI Matrix: Five KPI visual containers delivering instant visibility into Total Customers (10,000), Churn Rate (20.37%), Retained Customers (7,963), Exited Customers (2,037), and Balance Lost (₹18.56 Cr).
- Geography Analysis (Clustered Bar Chart): Disaggregates churn by country. Demonstrates an acute regional disparity in Germany (32.44% churn rate) versus France (16.15%) and Spain (16.67%).
- Gender Distribution (Sunburst / Donut Visual): Details female attrition (25.07%) versus male attrition (16.46%), highlighting a 8.6% gender retention gap.
- Age Group vs. Churn Rate (Combo Line & Clustered Column): Correlates cohort scale against risk. Columns chart customer counts while the trend line highlights severe churn escalation past age 40.
- Product & Activity Matrix (Pivot Table Heatmap): Cross-tabulates NumOfProducts against IsActiveMember, revealing the critical '2-product sweet spot'.

Power BI Architecture (Continued)

Page 2: Risk Drivers & Deep Dive (Diagnostic Suite)

- Multi-Dimensional Slicer Strip: Dynamic filter controls across Geography, Gender, HasCrCard, and IsActiveMember allowing instantaneous cohort isolation across all visuals.
- Age vs. Balance Scatter Plot (Color-Encoded by Exited): Plots account value against customer age, visually isolating clusters of affluent older customers (₹1,00,000+ balance, Age 45-60) undergoing systematic liquidation.
- Tenure Lifecycle Chart (Bar Chart): Tracks attrition across customer tenure (0 to 10 years). Demonstrates steady attrition across all lifecycle stages, proving churn is driven by product friction rather than early onboarding failure.

Page 3: Detailed Customer Table (Operational Action Desk)

- Drillthrough & Account Audit Grid: Comprehensive customer table exposing CustomerId, Geography, Age, Balance, NumOfProducts, IsActiveMember, and CreditScore. Enables branch managers to filter high-risk cohorts and export target call lists directly for outreach.

3. Empirical Risk Cohort Diagnostics

A rigorous multi-variate breakdown isolates four acute drivers of portfolio attrition:

Segment Dimension	Cohort Breakdown	Churn Rate	Capital Lost (INR)	Root Cause Assessment
Geography	Germany	32.44%	₹8.94 Cr	German attrition accounts for 48% of total lost capital; points to uncompetitive yields, local service friction, and fee sensitivity.
	France	16.15%	₹6.62 Cr	
	Spain	16.67%	₹3.00 Cr	
Number of Products	1 Product	27.71%	₹9.46 Cr	Holding 2 products is optimal. Accounts with 3+ products churn completely due to aggressive bundling and overlapping service fees.
	2 Products	7.58%	₹5.87 Cr	
	3 Products	82.71%	₹2.79 Cr	
	4 Products	100.0%	₹0.44 Cr	
Age Brackets	<30 Years	7.52%	₹1.35 Cr	Severe vulnerability in mature wealth-building years (41-60). Clients seek specialized wealth management and retirement products elsewhere.
	30-40 Years	12.09%	₹4.89 Cr	
	41-50 Years	33.97%	₹7.19 Cr	
	51-60 Years	56.21%	₹4.07 Cr	
	60+ Years	24.78%	₹1.06 Cr	
Activity Status	Active Members	14.27%	₹6.78 Cr	Account inactivity doubles churn risk. ₹11.78 Cr lost due to unmonitored digital account abandonment and lack of re-engagement.
	Inactive Members	26.85%	₹11.78 Cr	

4. Strategic Action Plan to Reduce Churn Rate & Retain Capital

To systematically reverse the 20.37% churn rate and secure the ₹18.56 Crore in vulnerable capital, the institution must execute four targeted operational initiatives:

Pillar 1: Regional Banking Audit in the German Market

Target Impact: Recover ~₹4.5 Crore in annual deposit outflows.

- Conduct an immediate market survey against local German institutions (Sparkassen, Volksbanken, Neobanks) focusing on savings interest yields, account maintenance fees, and transaction charges.
- Introduce localized, competitive fixed-deposit interest tiers and waive annual maintenance charges on debit cards for German account holders holding balances over ₹1,00,000.
- Audit regional branch support responsiveness, German-language digital interface usability, and self-service capabilities.

Pillar 2: Product De-Cluttering & Two-Product Cross-Sell Pathway

Target Impact: Reduce multi-product churn from 82.7% down to <15%.

- Immediately halt branch sales commissions incentivizing the forced sale of 3rd and 4th add-on products.
- Institutionalize the '2-Product Golden Rule': Transition single-product clients (27.71% churn) into a complementary secondary product (e.g., an automated recurring deposit or rewards credit card), unlocking the 7.58% retention rate.
- Audit existing 3- and 4-product accounts to eliminate overlapping hidden maintenance fees and simplify account management into a single transparent tier.

Pillar 3: High-Net-Worth Mature Segment Retention (Age 45–60)

Target Impact: Safeguard ₹11.26 Crore across the 41–60 wealth cohort.

- Deploy dedicated Relationship Managers for customers aged 45+ holding balances exceeding ₹1,00,000.
- Introduce priority wealth advisory, retirement planning instruments, tax-saving investment solutions, and preferential senior savings deposit rates to counter competitor poaching.
- Establish semi-annual portfolio review calls to strengthen institutional relationships with mature depositors.

Pillar 4: Automated Early-Warning CRM Inactivity Triggers

Target Impact: Intervene on ₹11.78 Crore in dormant deposit balances.

- Configure real-time core banking alerts: trigger automated outreach when an account exhibits 30 consecutive days of zero transactional activity.
- Dispatch personalized digital engagement incentives (e.g., utility bill cashbacks, fee waivers, high-yield auto-sweep options) at day 45 before formal account exit occurs.
- Integrate automated proactive customer service check-ins for high-balance dormant accounts.

5. Governance & Implementation Cadence

- Weekly Cadence: Branch and CRM outreach teams utilize Page 3 (Detailed Customer Table) to review filtered priority contact lists of inactive and high-balance clients.
- Monthly Executive Review: Retention steering committee monitors Page 1 (Churn_Overview) KPIs, tracking German regional churn reduction, 2-product adoption rates, and total balance preservation in INR.
- Quarterly Diagnostic Audit: Customer success teams leverage Page 2 (Risk Drivers & Deep Dive) slicers to assess the trajectory of the 41–60 age group and re-calibrate retention campaign parameters.
